

Meadow By: Kayla C.

A photograph of a pond filled with green lily pads and several pink lotus flowers. The scene is brightly lit, with sunlight filtering through the leaves and petals. The water is dark, and the overall atmosphere is serene and natural.

What types of animals and insects are found in this habitat?

Animals

- Brown bat
- Rabbit
- Garter snake
- Great horned owl

Insects

Ant
Honeybee
Firefly
Earthworm

What important roles do these creatures play in a meadow ecosystem?

In a meadow ecosystem honeybees and earthworms help the vegetation grow and rabbits eat the vegetation. The brown bats then eat the insects and the owls eat the small animals.

Why are meadows important to the environment?

Meadows are important to this environment because it supplies a home and food for many animals and shields them from possible danger. It adds flowers and beauty to this environment and the flowers attract birds who eat the seeds and carry them around, spreading the beauty of the meadow.
